## Health Monitoring System (HMS)

Ensuring the smooth functioning of surveillance systems is crucial for the efficiency of a security solution. While monitoring the performance of a small security setup is easily possible, the complex systems that involve multiple cameras and recorders, pose a serious challenge.

The Health Monitoring System by CP PLUS provides a real-time health status of your surveillance devices; it keeps you notified of the perceived critical issues and potential problems such as device going offline, hard drive failure, recording status, network outages, tampering, etc. Investing in the HMS helps you detect system issues automatically. It enables instant reporting of live incidents, reduces system downtime since issues are detected and rectified at the onset and provides daily system supports as well as live status web page view.

CP PLUS provides the HMS solution software which comes complete with live system reporting, alerts and alarms for hard drive failure, recording status, network outages, tampering, etc.

## Attendance Monitoring Solution (AMS)

The Attendance Management Solution (AMS) is a cloud-based facilitation tool for employers and employees, to track attendance, leaves, late comings, holidays, leave applications, and conveyance time & costs on a daily/monthly basis.

By simply downloading the AMS application on smart phones, employees can mark their attendance from anywhere, wherein their location and login time is captured using GPS. Employers, on the other hand, can keep a track of the regularity, attendance and punctuality of employees from anywhere, anytime. Ready access to the consolidated data of all employees with regard to their attendance, leaves and conveyance, in one place, helps them generate employee-efficiency reports and computes salaries with ease. AMS effectively plugs the loopholes of traditional tracking systems and provides transparency as well as comfort to both the employer and employees.
